OBJECTIVE

Full-stack Developer with nearly 3 years of experience building enterprises and EduTech web applications using Angular, TypeScript, Next.js, and Java Spring Boot. Experienced in micro-frontend architecture, performance optimization, SEO, CI/CD, Kubernetes, and enterprise infrastructure deployment. Seeking to contribute these skills to scalable, high-quality banking solutions.

EDUCATION

University of Transport and Communications

October 2020 - August 2024

Degree of Engineer in Information Technology · Graduated with Distinction

WORK EXPERIENCE

NGV Group – Fullstack developer

December 2024 - Present

Project: EPAS - Enterprise Process Automation System

- Designed and maintained Angular micro-frontend architecture, shared libraries, routing, integration patterns, and reusable UI foundations across enterprise modules.
- Built reusable Angular UI capabilities for dynamic forms, data tables, pagination, attachments, and activity history.
- Implemented CRM/BPM workflows covering transaction inboxes, task management, customer flows, and business-process interactions.
- Integrated frontend modules with Java Spring Boot microservices and Oracle/PostgreSQL data flows for enterprise operations.
- Implemented CI/CD pipelines with Jenkins, Docker, and Kubernetes for builds, image publishing, configuration, and multi-environment deployments.
- Supported on-premises infrastructure with Kubernetes clusters, ingress, registries, monitoring, and production troubleshooting.

Tech Stack: Angular – Micro Frontend, Java Spring Boot - Microservice, Redis, Kafka, Keycloak, Minio, Oracle, PostgreSQL, Jenkins, Docker, Kubernetes.

Project: Zalo Integration & Message Management

- Developed Angular modules integrating Zalo Official Account features into an enterprise management platform.
- Implemented message conversation management, template administration, filtering, status tracking, validation, and pagination.
- Integrated Java Spring Boot REST APIs and collaborated with BA, Backend, and QA to deliver production-ready features.

Tech Stack: Angular, Java Spring Boot.

MochiMochi – Frontend developer

March 2024 - August 2024

Project: Japanese & Chinese Language Learning Platform

- Developed and maintained learner-facing web applications for Japanese and Chinese language learning using Next.js.
- Improved performance and SEO through rendering and asset optimization, page structure and metadata improvements, and technical issue resolution.
- Refactored legacy code upgraded framework and dependencies, and standardized reusable components to improve maintainability and development efficiency.

Tech Stack: Next.js, React, TypeScript.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Java, SQL
Frontend	Angular, Next.js, React, NX, CSS/SCSS, Bootstrap, Tailwind
Backend & Data	Spring Boot, Node.js, Oracle, PostgreSQL
DevOps & Tools	Git, CI/CD, Jenkins, Docker, Kubernetes, Linux, Postman, Jira
